**From:** Steve Emery  
**Subject:** North Water Tower Rehabilitation

---

Keith:

As you are aware, the North Water Tower Rehabilitation project is scheduled to start on Friday, June 12, 2020. The project is being completed by Viking Painting, LLC of Omaha, Nebraska.

The North Water Tower Rehabilitation Project involves performing some structural modifications to improve tower maintenance and to update to state and federal guidelines, fully replacing the paint in the water storage area, partial paint repairs in the rest of the tower, and repairing, cleaning, and painting the entire exterior. When repairs and painting are being performed on the exterior, the contractor is required to comply with project and EPA requirements and monitor wind conditions to prevent the drift of dust, dirt, and paint. Full containment of the tank is not required because the existing coating system is not being completely removed and replaced. The new exterior paint will be applied by brush and/or roller only and spraying will not be allowed.

The project is currently anticipated to be completed by July 21, 2020.
