

East Grand Forks Water & Light Department

Life Connected Since 1909

WATER LINES

The Distribution Service Center distributes water to your home or business through the water main in the street. The water coming into your house from the street goes through the “curb stop” 4-6 feet from the curb and is connected to your water line in the house. The “curb stop” is the property and responsibility of the property owner. For water leaks, please call us to turn off the “curb stop”.

The Water and Light Department also does annual “Water Main Replacement” projects to replace the main water lines around town so they are kept in good working condition. We also do annual spring hydrant flushing to help maintain fresh drinking water during the spring melting.
